

Release Notes 3.2.5 (2025-11-10)

This release introduces improvements to the Individual Coverage Zone Editor along with adjustments that provide more precise control and configuration. It also includes refinements to interface behavior and reliability.

New

- Grid support in the Individual Coverage Zone Editor for easier alignment.
- New selectable setting "Idle" allowing adjustment of the camera without recalling a preset.
- mDNS name is now shown in the settings for easier identification.

Improvements

- Maximum size of individual coverage areas increased to 10×10 m.
- Minimum size of coverage areas reduced to 0.5×0.5 m for finer flexibility.
- Adjustment step size for coverage areas reduced to 10 cm.
- Snap-to-grid step size reduced to 5 cm for more precise placement.
- Minimum pre and post event delay times can now be set to 0.0 s.
- User interface layout updated so camera number, recall, and preset controls are grouped more clearly.

Fixes

- System standby transitions now consistently update all channels. A previous issue could leave channels in incorrect states after returning from standby.
