

Release Notes 3.6.0 (2026-04-30)

This release introduces extended AutoTrack capabilities with support for the Canon RA-AT001 Auto-Tracking Application, along with improvements to device integration, camera control, and system reliability.

New

- AutoTrack support for Canon CR-N series cameras using the Canon RA-AT001 Auto-Tracking Application.
- Extended AutoTrack configuration with support for additional control parameters.
- AutoTrack control added to Channel Table.
- Support for Inogeni IP2USB.
- Support for Crestron DM-NVX.
- Support for Roland HD Switcher.
- Caller status synchronization for INTELLIMIX® P300, INTELLIMIX® ROOM SOFTWARE, ANIUSB-MATRIX.
- NDI configuration with Group Name and Discovery Server.
- Unit system selection (Metric / Imperial) for Individual Coverage Zone Editor.

Improvements

- Reduced minimum time between camera/preset recalls from 2.5s to 1.5s.
- Improved hostname and mDNS handling.
- Improved switcher input configuration by showing connected output device descriptions.
- Updated dashboard layout and grouping.

Fixes

- Fixed switcher output handling (now dynamic).
- Added support for Sony Digest Authentication.
-

Other

- Under the hood improvements and stability enhancements.
